1 Introduction

This is our submission report of the CQA website made for Assignment 2 for the DBMS-2 course in 2023. The views.py API has the collection of function that are related to the backend. The submission includes a .zip file containing the app directory for the web-site.

Few edits must be done in the project directory's settings.py for the web application to run.

2 Programming Languages Used

We have used HTML,CSS and Javascript for the frontend of the website and Django and PostgreSQL for the backend and database of the website respectively.

3 Student-wise Contribution

J Sai Sri Hari Vamshi The backend related to posts management (create, homepage, edit, reply) and a bit of search application.

Aayush Prabhu Beautifying the Front End using CSS and a bit of HTML.

Abhishek Kumar Back-end for Login, cookies, Registration and Auto-complete.

Megh Shah Ideation for auto-complete algorithm.
